SET UP: ALI COMENDA S.A. - GASTROFROID SARL

### A DREAM FROM NORMANDY

**If you dream of a holiday filled with relaxation, culture and gastronomy, Château du Landel is the ideal destination.** Located in Bézancourt, between Beauvais and Rouen, this beautiful 18th-century castle will welcome you in an atmosphere rich with charm and history.

Château du Landel was an ancient relais for pilgrims travelling the Santiago de Compostela route, and later the residence of master glassmakers until 1870.

It's surrounded by a green and flowery park, next to the forest of Lyons, the largest beech forest in Europe. Here you can enjoy nature in all its beauty, walking through centuries-old trees, admiring wildflowers and listening to singing birds.

Today it is a hotel with elegant and comfortable rooms, furnished with taste and personality. **Each room is different from the others, but they all combine the charm of the past with modern comforts.**

**Likewise, the restaurant inside the structure offers traditional dishes of Norman cuisine, cooked with fresh local products, revisited in a modern way.**

In the Château du Landel, **tradition and innovation infuse the structure**, the atmosphere, and **every dish placed upon the table... up to the most recently installed dishwasher: the under- counter unit (YF45 R) of the new Infinity range with external reverse osmosis unit.**

**Giovanni Assi**  
Junior Mechanical Project Engineer, Comenda

"The Infinity range has been a great challenge for everyone at Comenda, involving almost every department of the company," explains Giovanni Assi, Junior Project engineer. "It was really exciting to be able to participate in the design of a range that had the strength and reliability of Comenda's 60 years of experience, but that embraced all the latest technologies in terms of washing, electronics and man-machine interaction."

The model chosen for the structure is an under counter unit with a 500x500 mm rack and a washing chamber with a 400 mm clearance. Compared to standard models, the washing and rinsing patented system Wris2+® guarantees a 25% saving in terms of energy, water and detergent. The arrangement of the components inside the technical compartment makes it an easy machine for any technical work. But the first detail that draws attention is the full touch control panel with a user-friendly graphic interface, intuitive icons, simple operation feedback for every operator, and Wi-Fi and Bluetooth connection for remote monitoring.

What is it missing? Nothing, not even an external reverse osmosis unit that has been installed to ensure perfect water quality and to be able to support the structure, especially during the washing of glasses and cutlery. It eliminates the need for manual drying, ensuring flawless results without streaks or stains on the surface of the treated objects.

## THE STRENGTH AND RELIABILITY OF COMENDA'S 60 YEARS OF EXPERIENCE

"It is interesting to discover that a structure like Château du Landel, which combines tradition and innovation in all aspects, has chosen a product that was born with the same premises, with values that we also share. When they chose the Infinity project team, Comenda put together seasoned and young designers. Experience and innovation. That allowed us all to grow. Young members of the team, like myself, learnt more and more about products, but we also had the space and opportunity to input our point of view, our innovations and ideas. I would like to say: "The experiment was a success," but perhaps it is better to let the owners of Château du Landel decide," concludes Assi.

For over 20 years, this property housed a Comenda under counter dishwasher. Loyal to the brand and happy with the long collaboration, when it was necessary to replace the product, the owners of Château du Landel knew that no dishwasher would have better represented their philosophy and Comenda than the new Infinity range.

We can only recommend you to visit the Château and enjoy a good glass of wine in the park. It will be brilliant for sure.
